

# “A state-of-the-art system”

**Diskteknik is a leading supplier of hygiene and cleaning products for i.a. hotels, caterers and restaurants. Among the company’s more than 5,000 articles you also find technical equipment for many purposes within the restaurant and food business. Due to limited functionality of the old business system, Diskteknik chose Bitlog as supplier of a modern WMS system, launched in 2015.**

“Our old system lacked many important features, which made warehouse and logistics routines inefficient and time-consuming”, says Erik Ericsson, head of IT and business development at Diskteknik. “In addition, the hardware was outdated and undersized, which hastened the decision on a complete upgrade.”

“After procurement, where Bitlog’s skills and experience were the decisive factors, we began the task of specifying system and hardware requirements. When we went live in March 2015 we were able to rejoice in a modern and efficient WMS with a high degree of automation. The warehouse staff is now using iPad Mini and Bluetooth-connected hand scanners, which has minimized the need for manual work.”

“The implementation of Bitlog WMS has been a huge improvement for us at Diskteknik, as well as for our customers”, concludes Erik Ericsson. “Spontaneous comments from the warehouse staff is all about how efficiency – as well as job satisfaction – has increased significantly thanks to automation. Moreover, it is easy to obtain both general and detailed information from the system. On the whole, we are very satisfied with both our new WMS and Bitlog’s efforts regarding implementation and support.

Diskteknik has implemented Bitlog WMS Standard.
