

“Fully integrated with our ERP”

Founded in 2008, Skruvat has rapidly grown into the largest e-commerce company in spare parts and accessories for cars. Today Skruvat offers about half a million items in its web shop, thus putting high demands on logistics and warehouse functions. To ensure control and increase efficiency Skruvat chose to implement Bitlog WMS.

“Our e-commerce solution is designed for large volumes”, says Peter Carlswärd, logistics manager at Skruvat. “However, it turned out that our original ERP system lacked the logistic and warehouse functionality that was necessary for our rapid growth. There was simply too much manual handling, causing stress among staff and delayed deliveries to customers.”

“Initially, we planned to replace our whole ERP system, but Bitlog presented a solution where their WMS system could be integrated with our existing ERP, without compromising quality. Rollout went very smoothly and in October 2014 Bitlog WMS was up and running.”

“We could instantly notice major improvements in efficiency and quality. Warehouse staff are now working with iPad and Bluetooth scanner, providing major time savings and fewer errors. The system also gives us complete control over the entire logistic flow, as well as stock status and order processes.”

“Cooperation with Bitlog has been intense and exciting”, concludes Peter Carlswärd. “The result has in every way met expectations, and we now look forward with confidence to the next phase where we i.a. will develop a differentiated cross-stock feed – which means that incoming items intended directly to the customer does not need to stop in the warehouse.”

Skruvat has implemented Bitlog WMS Standard together with the optional E-commerce Accelerator and WMS Advanced.
